**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U. S. C. 121:

I. Claims 1-11, drawn to a peptide having 10-50 amino acids, wherein the peptide enhances bone growth, and wherein the sequence comprises a motif selected from the group consisting of an integrin binding motif, a glycosaminoglycan binding motif and a calcium binding motif, classified in class 514, subclass 2, and class 530, subclass 300.

II. Claim 12, drawn to a method of reducing bone loss, comprising administering to an individual a peptide of claim 1, classified in class 514, subclass 2, and class 530, subclass 300.

III. Claim 13, drawn to a method of reducing renal phosphate excretion in an individual, comprising administering to an individual a peptide of claim 1, classified in class 514, subclass 2, and class 530, subclass 300.

Should Invention I, II or III be elected, applicant is required to select one motif from claim 1, and if calcium binding motif were elected, applicant is also required to select one peptide sequence identified with "SEQ ID NO:" with each position defined. Each peptide sequence with a different motif has a different amino acid sequence, exhibits different chemical property, and produces different effect, thus, is a distinct peptide. This is not species election.

2. The inventions are distinct, each from the other because of the following reasons:

The product of Invention I and the methods of Inventions II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another

Art Unit: 1653

materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the methods of Inventions II and III are alternative processes of use of the product of Invention I.

The methods of Inventions II and III are patentably distinct each from the other because they have different method steps, utilize different materials and produce different results.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their recognized divergent subject matter, and because each invention requires different searches but are not co-extensive, examination of these distinct inventions would pose a serious burden on the examiner and therefore restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
